

COMPANY PROFILE

AMTECH ENGINEERING

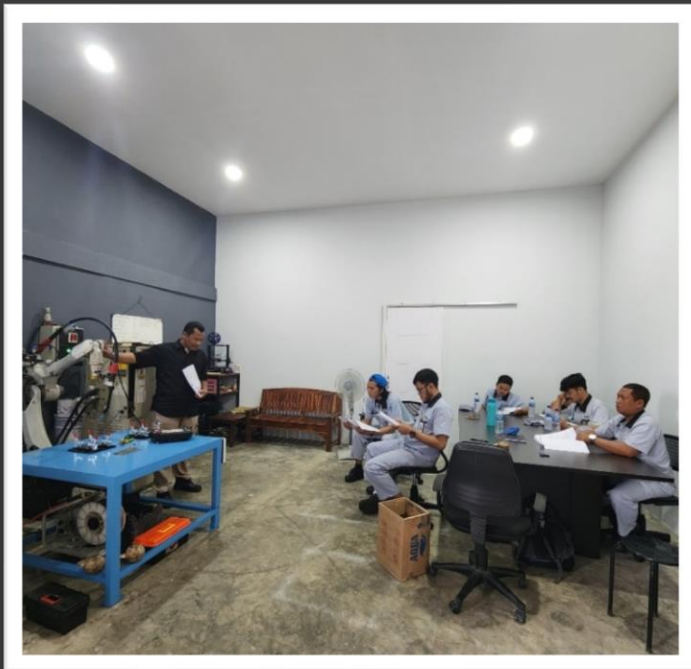

Automation and embedded system

AMT SERVICE

- Starts from 2013 as an electronics and PCB repair workshop, we expand our services to machinery repair & maintenance, industrial robotics and embedded system integrator.
- Based on our experience, we committed to bring low cost maintenance of your machinery and PCB's repair with high quality services.
- Facing industry 4.0 we also boost our research team to providing data acquisition, data logging and remote application for factory automation, in many types of gateway and platform.

Robotic Workshop & PLC Training

We Provide training for robot operation, maintenance and PLC automation,
With our experienced trainer, we make sure all trainee get the best training experience.

Machinery & Industrial Robot Retrofit

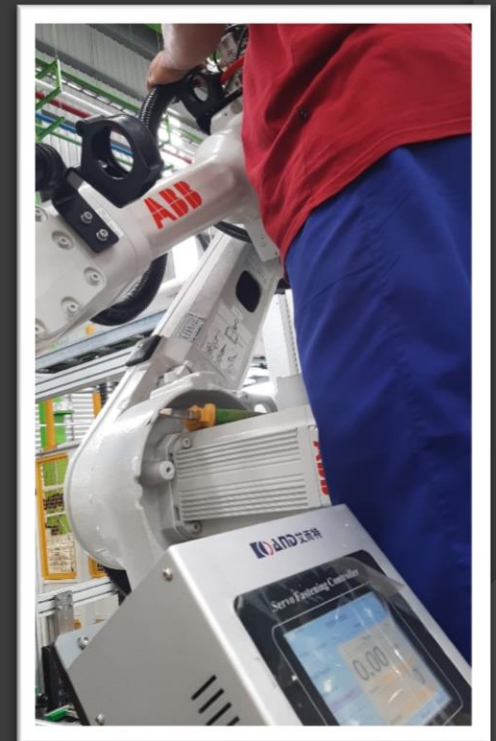

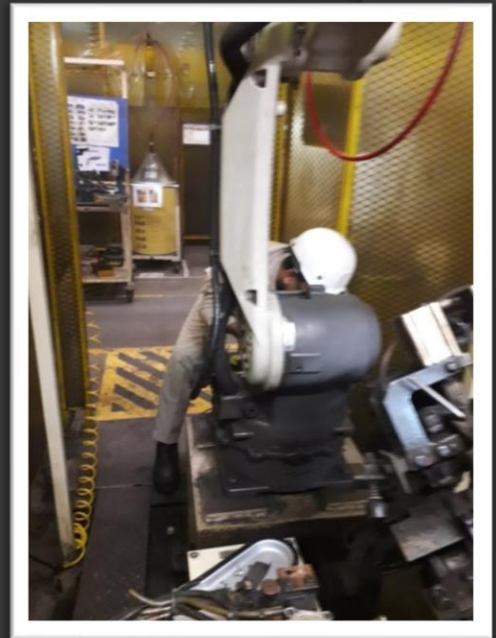

For some factory, they prefer to choose second hand machinery for their investment,

To fulfill that we do machine retrofitting with original and high quality spare parts to make sure all machine have the best condition to run in factory line.

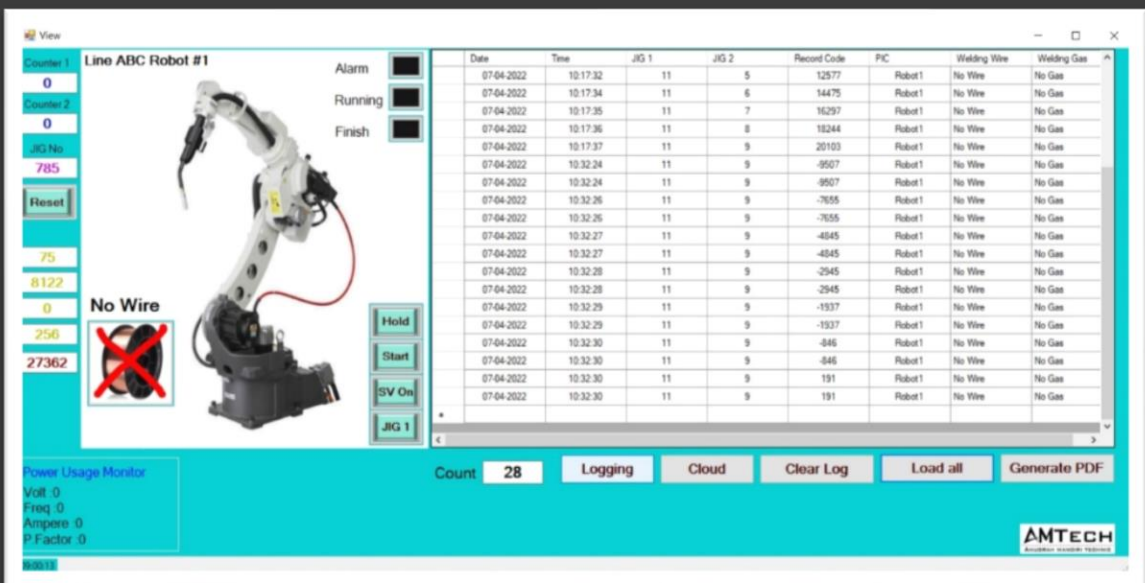

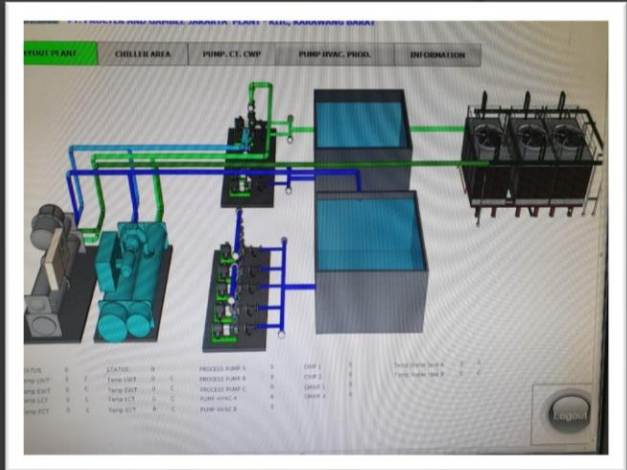

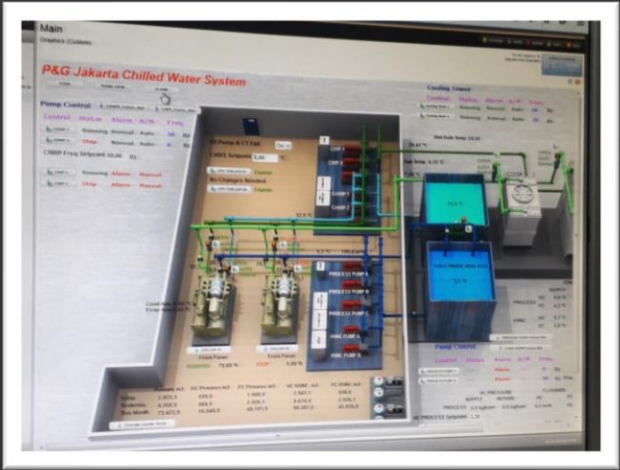

Robot Maintenance And Teaching

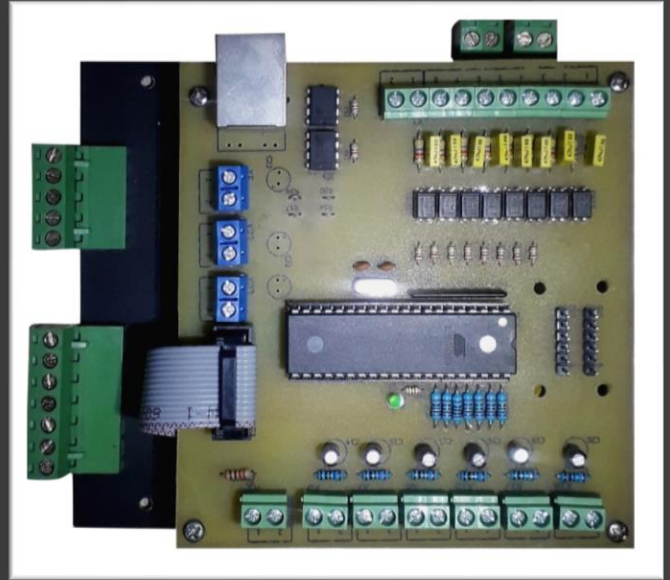

Our Professional Robot engineer team are ready to do maintenance, troubleshooting and teaching for your robotic systems.

Scada & Monitoring Apps

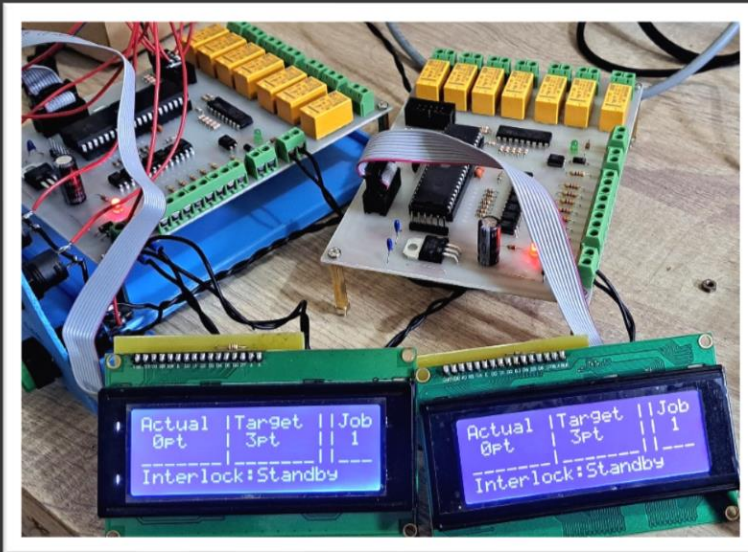

If you need IT support or Machine IIoT, we also provides the great team, Networking engineer, Software developer and hardware designer, to make your factory line go online.

Embedded & Custom Electronic Controller

Our latest Product, HVAC (AHU) embedded Controller with customizable function with competitive price.

Embedded & Custom Electronic Controller

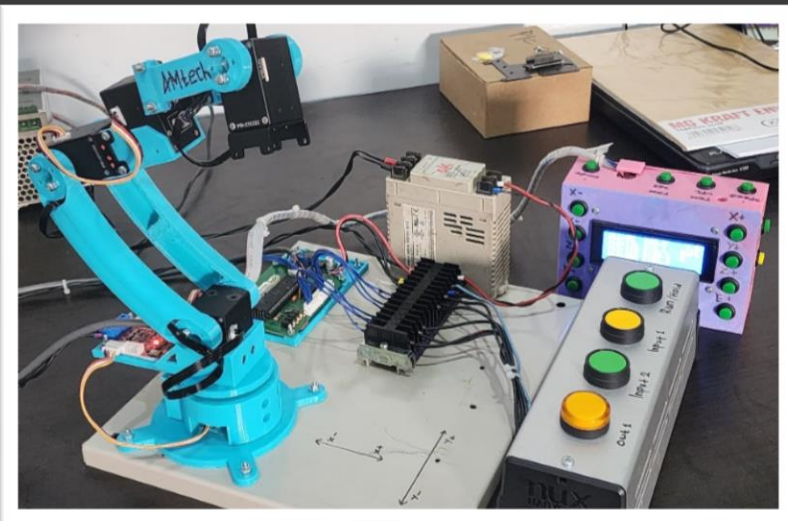

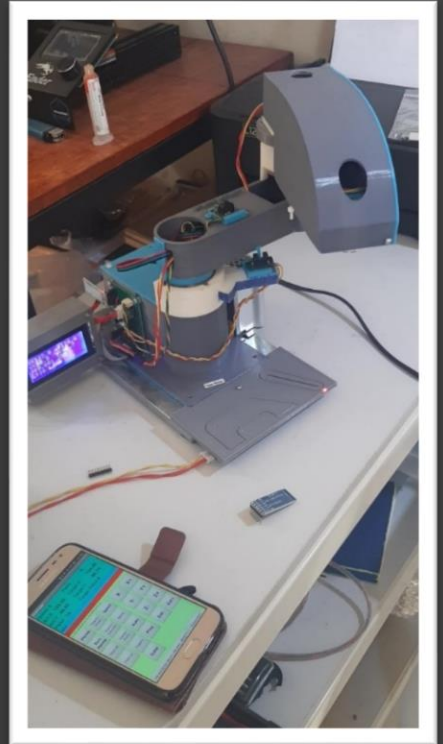

We Continuously doing research and development to create our own control system based on microcontroller and microprocessor,

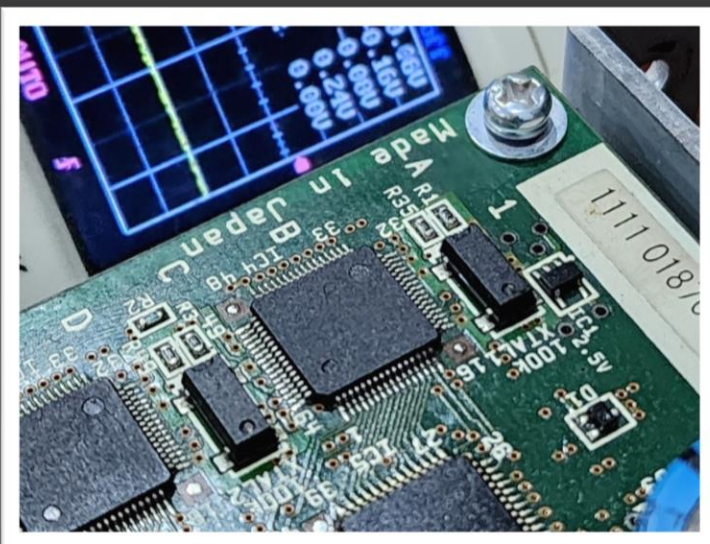

we choose this device due its flexibility, ability to sync with many devices and sensors also the most important thing is the whole system will be very low cost compared to PLC's without reduce its quality and performance.

Small size arm and scara robot

We continuously develop desktop sized robot for educational or modelling purposes to be used in university and hobbyist. The robot can run some basic tasks like handling, gluing and others, also user can connect PLC to its IO port to simulate real life robot automation system. Robot controller comes with interactive app that runs on PC and Smartphone.

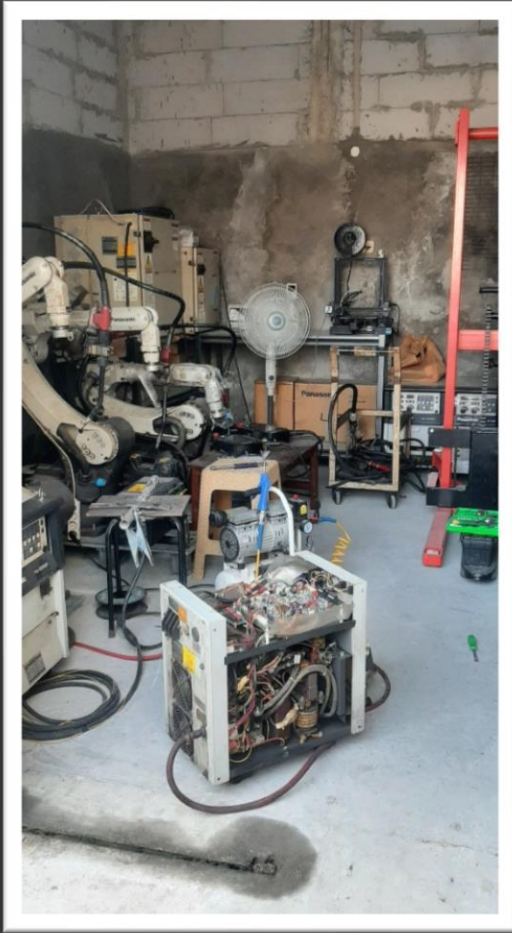

PCB Repair for special machinery

We are very understand the price of PCB control for machinery are very expensive, sometimes when error occur in your system, that's no need to replace whole PCB, as a solution for this situation we offer to check and repair your expensive PCB that can reduce machine repair cost effectively.

MIG & MAG welding Machine Repair

Welding machine repair for MIG, MAG, Spot Welding and another welding machine type

PLC automation System, Panel Control & Panel distribution

Panel controller with PLC and/or embedded PCB for any machinery purposes

General Spare parts

⦿ **Electrical Parts**

- ⦿ MCB/MCCB
- ⦿ Inverter
- ⦿ Servo amplifier
- ⦿ Relays
- ⦿ Power supply
- ⦿ Socket, terminal, connector, etc.

⦿ **Electronic Component**

- ⦿ High current MOSFET, IGBT & Diode
- ⦿ Basic electronic component
- ⦿ MicroController and special IC's
- ⦿ Industrial capacitor & Resistor
- ⦿ Electronic module and KIT
- ⦿ LCD module

⦿ **Basic Machinery Parts**

- ⦿ Cooling fan
- ⦿ AC Panel
- ⦿ High current fuse
- ⦿ Backup battery (for PLC, Robot, Servo, etc.)
- ⦿ Sensor
- ⦿ Temperature controller & Heater
- ⦿ Counter module
- ⦿ SSR (solid state relay)

Address And Contact

- ◉ Workshop & Office

Perum GCC2, Jl. Utama Blok F31 No.24

Kedungwaringin, Cikarang timur, Jawa Barat 17540,
Indonesia

HP: 0878-8986-3138 (imam sanusi)

- ◉ Email : Amtech.mtc@gmail.com

- ◉ NPWP: 85.923.387 6-447.000

- ◉ IG : @amt_services

- ◉ Google Bussiness:
